

NeoLearning

Create personalized courses with the power of artificial intelligence

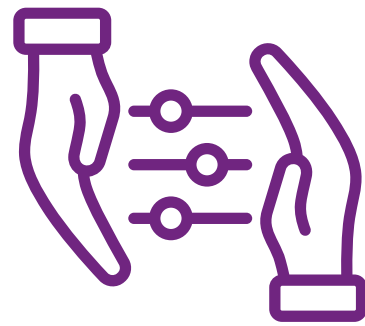

NeoLearning

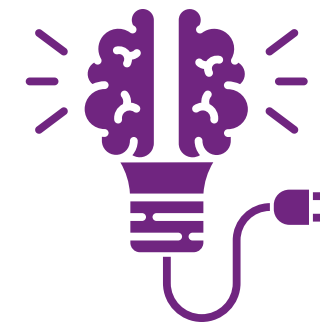

NeoLearning is a solution designed to create personalized content and study materials for each user. Thanks to artificial intelligence, we are able to analyze needs, identify skill gaps and create personalized content, ensuring that both internal employees and customers receive effective learning experiences.

Personalized learning experience

Personalization of content based on individual needs and skill gaps

Adaptive content that reduces learning time

Dynamic and tailored learning experience that increases student engagement

Personalized materials for employees and customers, optimizing productivity and satisfaction.

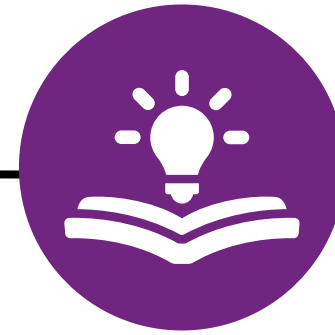

How it works

User analytics

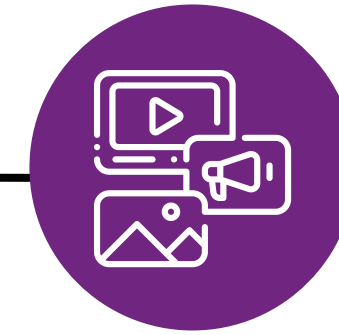

AI analysis of user profile details to develop a personalized learning path.

Knowledge Base

The system draws information only from validated and certified sources.

Content Generation

Using the power of generative AI, personalized content is created in different formats (text, audio, slides...)

The platform

Course topics

Introduction to AI and its Business Applications

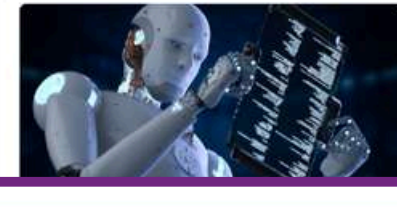

This chapter introduces the fundamentals of AI, its key technologies.

55%

Machine Learning Algorithms

Dive into the chapter on learning.

Chapter 1

1.1 Understanding Artificial Intelligence

Artificial Intelligence (AI) is no longer a futuristic concept—it's a transformative force shaping industries across the globe. At its core, AI refers to the development of machines and systems capable of mimicking human intelligence to perform tasks like learning, and even learning from experience.

AI systems can analyze data, recognize patterns, and act on those patterns. This capability is essential to automate complex processes, gain insights from data, and unlock new opportunities for growth.

AI is used in e-commerce to fraud detection in banking, and to help companies operate and compete in an increasingly data-driven world. It provides a foundation for understanding AI's core applications in modern businesses, setting the stage for machine learning, NLP, computer vision, and other AI technologies.

Course content generation

Starting from user data, the system generates a fully personalized course based on a verified knowledge base

AI Assistant

Whether users need help understanding a concept or exploring specific topics, they will always have an AI assistant to accompany them as they learn.

Simplified integration

The solution can be customized according to business needs and easily integrates with company services, portals and platforms

System suitable for the needs of various sectors

FINANCE

Build awareness and trust among customers and open up new opportunities for up-selling and cross-selling. Keep teams up to date on industry opportunities and regulations.

INSURANCE

Provide training on regulations, insurance products and sales techniques. Support compliance, improve customer service skills and provide educational content to customers.

LEGAL AND TAXES

Customize training for legal staff, accountants, consultants, offering learning paths on compliance or application of new laws and regulations.

EDUCATION

Supports schools, universities and companies, offering customized courses, real-time feedback, and accessibility. Create a more effective and engaging learning experience.
